

LOC Store Management Suite is a complete "Suite" of applications designed for the retail industry, from the Point Of Sale system all the way to central Host and Warehouse Management.

LOC Store Management Suite is the perfect tool to Buy, Sell and Manage

THE STORE MANAGEMENT SUITE...

LOC Software has been supplying retailers across the world with a multi featured Store Management Suite for many years. Thousands of store owners and managers use LOC Store Management Suite to serve their customers, analyze sales data and to manage their business in an efficient manner. LOC Store Management Suite software can be used for all your business needs such as customer management, PDA device support, scale interface, kiosk, internet ordering, host and warehouse management and much more! Join the thousands of customers who have discovered LOC Store Management Suite is more than a POS system.

The latest generation of products was designed from the top down to allow total store control in multiple types of environments. LOC software ensures customers that the investment they are making today will be a wise and enduring one by adapting only the latest technology standards and providing an open solution.

Clear and efficient management

Isn't it time that you acquire the high tech tools that will allow you to meet both you and your client's needs? We have developed the Store Management Suite software by combining years of research, product development and consultations based on client's own specific requirements. In addition, we have designed our software so that it will help you to manage your business more efficiently and allow you to make it more profitable.

Everything you need is included!

LOC Software has eliminated the need for retailers to look any further for a complete integrated solution. From powerful product management, customer loyalty program, inventory, label package and electronic journal, LOC Software has covered all the needs of retailers with the LOC Store Management Suite. Discover sales reports by product (regular or promotional), margin, stock count, trends, cost management, inventory, cashier balancing and much more. LOC Store Management Suite is designed to ease your management tasks at the point of sale as well as in the office. All reporting tables include cumulative totals by day, week, month and year.

Let's talk Technology

LOC Store Management Suite's most recent technology includes everything you need to control your store. This starts with LOC-SMS Point of Sale system which is fast, flexible, safe and easy to use software. It allows you to manage all cash register transactions providing greater control for store managers and owners. Developed by using a concept of independence between the server and the point of sale (POS), the network guarantees continuous and safe cash register transactions. The LOC-SMS application uses a relational database (MS-SQL), therefore allowing simplified operations and offering analytical tools that are both fast and precise. The database's structure is built using data warehouse architecture.

LOC Store Management Suite All in One...

- **Full Featured Point of Sale:** The LOC-SMS Point of Sale system offers superior support data handling capabilities. Features: touch screen or keyboard, debit/credit, fuel interface, advanced customer loyalty features, support for scanners, scales, kiosks, display and printing options.
- **Product Management:** A full featured Item Maintenance program based on the SIL data dictionary; multiple vendors per item, multiple price levels per item, effective screen layouts, extended filter criteria, powerful global changes and real-time data analysis.
- **Customer Management:** The LOC-SMS Customer Database provides flexibility for multiple management purposes: accounts receivables, check validation, loyalty programs. The customer information can be broadcasted to all terminals or queried from a central database over a WAN.
- **Inventory Management/Receiving:** A reliable inventory control system: physical count and inventory adjustment, multiple counts (multiple locations) for the same product, automatic inventory update. LOC-SMS also allows you to manage receiving and cost of goods. Goods receiving can be done through an RF Controller or directly from your computer.
- **Balancing and Accounting:** The Balancing module is a tool to manage pickups, loans and declares for each cashier. It also supports safe management: deposits, withdrawals and declarations. You can also enter all your accounting entries like paid in and paid out.
- **Native Label Printing:** The Label Printing program has been designed to fit with retail industry requirements: printing labels from internal or external batch, bulk printing, unlimited label formats.
- **Flexible Report Generator:** LOC-SMS uses Report Builder report generator. LOC-SMS system currently contains over 500 reports for sales analysis. You can also create your own reports.
- **Import/Export:** The LOC-SMS database has been designed in conformity with the Standard Interchange Language in order to provide flexible import and export utilities: ASCII or DBASE format converted to SIL standard file, map file to extract information from source file, deli scale interface.
- **Purchase Order/Allowance:** An integrated tool for purchase order entry, PO/delivery slip compassion and vendor bill control. Orders can be exported to the account payable software.
- **Kiosk and Price Checker:** Our Kiosk module can be used for price verification, customer points, balance or promotion. Interface to price checker devices like NCR or Symbol. Supports Windows/PC Web kiosk with support for scanner and printer.
- **RF Hand Held Controller:** With the RF Controller, LOC-SMS functions are now virtually accessible anywhere, anytime. Our portable unit allows you to verify or change a price, receive stock, update information, enter orders and print labels.
- **Labor Management:** This full-featured time management tool lets you create and maintain your employee schedules efficiently.
- **Renting Feature:** You can now use LOC-SMS to rent your videos, games, tools, cleaning machine...
- **Electronic Advertising:** 66% of purchase decisions are made in store; a good reason to put more time, attention and strategic design into your store advertising
- **Scale Interface:** Interface your LOC-SMS database to all your department scales. Using drivers from Invatron, we can now deploy changes to your register and your scale at the same time.
- **Fuel Interface:** Our fuel interface is complaint with major pump suppliers like Gilbarco, Bennett and WAYNE: integrated pump control at the POS system, sales reports for gas and store operations and gas inventory control.
- **Interface to Digital Video Recorder:** Review a transaction live from your back office. It is a very powerful tool for loss prevention.
- **Warehouse:** This module provides ordering and shipping functions to ensure accurate and efficient management of your orders. It also supports inventory commitment, shipment handling and fees.
