INVENTORY SHRINKAGE

Inventory shrinkage is caused by a combination of employee theft, shoplifting, vendor fraud and administrative errors. Retail companies in the United States lost over 31 billion dollars in 2002 due to retail theft. According to a national retail survey, retailers lost over 1.7 percent of their total 2002 sales to inventory shrinkage. OpenEye's RediWatch POS Integration Software and video solutions can help reduce these losses.

*National Retail Security Survey, November 2002

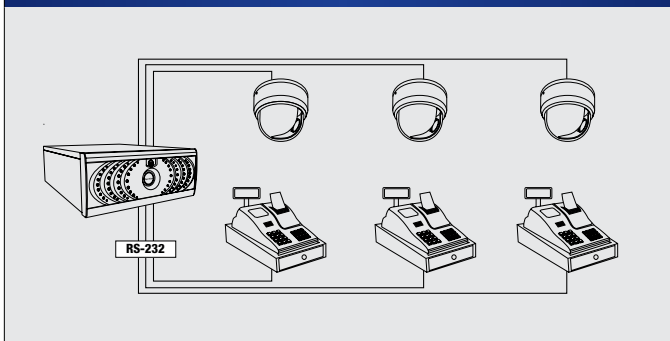

INTELLIGENT SEARCHING

The RediWatch software offers users advanced methods of searching through recorded purchases. Users can utilize the advanced event search to analyze specific channels, transactions, items and even dates and times. Users can also export recorded transactions via JPEG or AVI video format with the recorded transaction overlaid on the video. Transactions can also be easily filtered through with highlighting options.

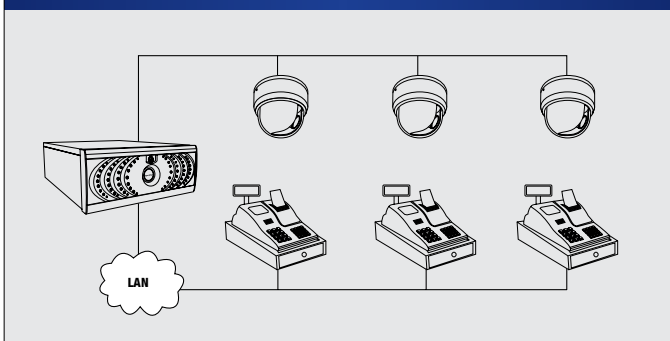

ADVANCED SETUP

The advanced setup features of the RediWatch POS software makes it ideal for most applications. Customize your POS display fonts with alternate types, colors and sizes for normal and alert displays, ensuring easy readability. Furthermore, use customized alerts to notify users when specific items are purchased, allowing users to keep track of those items.

BASIC RS-232 CONFIGURATION

BASIC TCP/IP CONFIGURATION

FEATURES
